

Field Safe Solutions vs Blackline Safety

Field Safe Solutions offers a holistic approach with regards to enterprise environment, health, and safety software solution (EH&S). Field Safe’s design philosophy is centered on three main objectives: Ease of Use, Safety Focused, and All in One Place. Aggregating these key aspects of an EH&S solution enables Field Safe to provide impactful insights into your program performance. In near real-time, EH&S professionals have visibility into aspects of success and areas that may require additional attention to ensure worker safety and accountability.

Ease of Use – Field Safe’s user interface solves the problem of field worker engagement by presenting an easy to use, approachable, and worker-centric interface for communicating requirements and enabling data collection. This design approach ensures data is captured and transferred from the field to your organization in real-time.

Safety Focused – The Field Safe platform is designed to address all areas related to EH&S programs. From Lone Worker monitoring and alerts to real-time document and form submission, Field Safe’s platform is focused on safety.

All In One Place – Complete visual of all aspects of your health and safety program. No longer do EH&S professionals have to switch between multiple dashboards to gather data about their safety program. When EH&S data is delivered and centralized in one place, insights, trends, and data analysis happen seamlessly in one convenient location.

Feature	Field Safe Solutions	Blackline Safety
Configurable Workflow, Forms, Notifications	YES	NO
